

RESONANCE is a phenomenal eye-opening documentary that reveals the harm we are doing by existing in an ocean of man made wireless frequencies.

[Resonance - Beings of Frequency](#)

[India Cuts Exposure Limits 1/10th of ICNIRP Level in December 2012](#)

Under 3% of the Global population was using cellphones in the mid eighties whereas today, about 99% of people use cellphones on a daily basis. In the last 25 years, species endowed with a magnetic sense have declined significantly. Bee populations are highly affected and have dropped by up to 70% worldwide, 35 Species of Australian shore-bird population decreased to up to 75%, all European grassland butterflies declined 50%. Bees pollinate over 90% of the world's plants! Cellphones could end up costing us civilization itself.

Our understanding of EMF exposure on the human body is very limited. We buy cellphones for children and have no idea what type of risk that's carrying. Now we live in a sea of electromagnetic radiation.

We need to know the adverse health effects of EMF exposure so that we may put appropriate safety regulations in place.

MTHR (Mobile Telecommunications and Health Research) were set up and funded by the mobile industry. Their purpose was to fund research on the possible adverse health effects of electromagnetic frequencies. MTHR funded research is blatantly flawed, they made fundamental and obvious mistakes.

Has anyone ever believed putting microwaves to your brain was safe? We don't understand what we're doing, we don't know what is going on, it's invisible to us, and we're submerged.

We must shed the light about higher thermal sensitivity in certain population groups, such as infants and young children, the frail and/or elderly, and people with diseases or taking medications that compromise thermal tolerance.
