## ICNIRP Members

The network diagram shows various members of ICNIRP connected by lines, with nodes in purple, green, orange, and grey. A legend at the bottom left identifies the node colors: purple for 'Member', green for 'Observer', orange for 'Honorary Member', and grey for 'Former Member'.

## The Swiss Report

"Electrosmog" is suspected of causing or promoting cancer and other diseases. Prevailing opinion assumes, however, that the electrical engineering and power industries can only be held liable if science provides conclusive proof – which it has not done to present – that weak electromagnetic fields (EMF) impair health. This publication comes to the opposite conclusion and shows that, on the basis of present knowledge alone, it must be expected that plaintiffs will win suits dealing with this issue.

## Huawei, will Rule The World

**Huawei will rule the world, says founder**

*By Brian Stein*

Huawei will rule the world, says founder, in a new article in the magazine 'The Economist'.

Ren Zhengfei, 44, a former officer at the People's Liberation Army, and founder of Huawei, says that his company is going to rule the world.

The Chinese telecom giant is widely credited for the rise of 4G LTE mobile phones and smartphones. It is also the world's largest equipment manufacturer for mobile networks.

The French government is considering buying 4G equipment from the Chinese company, though it is opposed by the US.

Huawei also has state backing that could give it the edge in the competition with Apple and Samsung. It is also the world's largest supplier of mobile phones and smartphones.

The article suggests that "the competition is facing a choice: either to remain in the market, or to be replaced by Huawei. The latter is the more likely outcome."

In the article, Ren says that he is not a nationalist, but that his company is a Chinese company. He says that his company is a Chinese company, and that it is a Chinese company.

He also says that his company is a Chinese company, and that it is a Chinese company.

**Colorectal Cancer is Soaring Among Young Adults Are Smartphones in the Mix?**

*Epidemiologist Dr. Sun Li Wants To Know*

Americans in their 20s are getting more colon and rectal cancer. There have been 1,000 new cases each year since the risk of developing colorectal cancer has tripled since the mid-1980s, compared to those born around 1950, according to the American Cancer Society. Similar patterns are being seen in many other cancers.

Known risk factors for colorectal cancer include obesity, an unhealthy diet and lack of physical activity. But Dr. Sun Li, an epidemiologist and senior IMB researcher, doesn't think that's what's going on.

Li offers a different hypothesis: Young people's habit of carrying their cell phones in their bra or back pockets of their jeans. When placed in trouser pockets, the phones are in the vicinity of the rectum and the distal colon and these are the sites of the highest increases in cancer," he said.

It may be something, smartphones or cell-phone use, that is with the research - and beyond. If radiation - that often than previous types of cell phones, and in a pocket, there's actually no separation from the body, unlike that assumed in safety testing.

How high are the emissions? There's been no field research, it's hard to find out how much more they get. It may well make you think back to "back in your pocket again."
